

CME Information

DV023 – Endoscopy in the Bariatric Patient

Instructions:

Read this information sheet pertaining to the video. View the video, then complete the evaluation form. Return completed evaluation forms to the ASGE via fax, mail or email. A CME certificate will be emailed within 2-4 weeks of receipt to the email address indicated on the form.

Description and Learning Objectives:

The problem of obesity has reached near epidemic proportions in the United States and parts of the developing world. This has resulted in a dramatic increase in the number of bariatric procedures performed annually. The gastric bypass is one of the most common forms of altered anatomy the gastroenterologist will face.

This interactive DVD tutorial illustrates normal post-bypass anatomy and common abnormal findings. It also highlights basic and advanced endoscopic techniques applicable to the bariatric patient. Winner of the 2006 ASGE Audiovisual Award.

After participating in this educational activity, learners will be able to:

- Understand post-surgical anatomy and expected endoscopic findings;
- Identify common abnormal findings, including fistulae, leaks, strictures, and anastomotic ulcers; and
- Explain advanced and experimental techniques currently in clinical use, including methods of fistula closure, treatment of leaks, and ERCP techniques.

Target audience: Practicing gastroenterologists, gastroenterology fellows and trainees, medical residents, physician assistants, nurses.

Author:

Christopher C. Thompson, MD, MSc

Disclosures:

All faculty participating in continuing medical education programs must disclose to the audience any financial interest with any commercial supporter or other relationships with manufacturer(s) or providers of any product or service related to the content of their presentation.

The author disclosed no relevant financial relationships.
